Method of administration	May be taken under the tongue or mixed with other liquids				

Cannabidiol, commonly known as CBD, is a compound extracted from the Cannabaceae family of plants. It is usually infused with a carrier oil. **Cee Be Do™** uses MCT (medium chain-triglyceride), producing a more stable product that is also easier to use. Unlike THC (Tetrahydrocannabinol), CBD does not cause hallucinations or psychotropic effects commonly associated with Cannabis.

The World Health Organisation (WHO) has concluded that CBD is generally well tolerated and has a good safety profile with limited potential for abuse or dependency.

CeeBeDo™ is an unregistered complementary medicine and has not yet been evaluated by the SAHPRA for quality, safety or intended use. **CeeBeDo™** is, however, being manufactured in a SAHPRA licensed, GMP facility complying with all the necessary quality checked. This gives you the assurance that CeeBeDo™ is a product range that you can trust.

For the athletes:

“The World Anti-Doping Agency (WADA) has excluded CBD from its list of prohibited substances.” (D. Lachenmeier & P. Diel, Sports, MDPI, December 2019). All other cannabinoids, except CBD are still on the prohibited list.
